MAXELL'S DIGITAL WIRELESS HEADSET: THE ULTIMATE HOME AUDIO EXPERIENCE

Maxell invites you to go wireless and upgrade your audio technology with the new
Digital Wireless Headset (MXL-1191)

London, UK, (February 2009), Maxell Europe Limited, the technology brand leader is delighted to announce the release of its high-performance, professional 2.4 GHz Digital Wireless Headset (MXL-1191). Offering more than just music to your ears, the high quality, perfectly balanced audio invites you to work, chat, game and watch movies without wires to tie you down.

So how does it work? The MXL-1191 plays audio wirelessly from your PC or console through a USB base station that doubles up as a charger, with no need for software installation. Unlike standard wireless headsets that require you to 'tinker' with various buttons to associate them with their transmitter, the MXL-1191 conveniently connects with the USB base station as soon as you plug it in to charge. The practical built-in rechargeable Li-ion battery also involves minimal effort, compared to the AAA batteries used in most other wireless headsets and headphones.

The audio quality is also exceptional. This headset has been specially designed to reduce latency and improve audio signal, providing interference-free, perfectly clear communication. With an impressive frequency response of 20 Hz~30,000 Hz and an outstanding 20m wireless range, you are free to roam around, answer the door and grab that cup of tea, whilst effortlessly continuing with your application. The built-in noise-cancelling microphone produces excellent voice quality, again making it perfect for chatting to friends. The battery requires just 2 hours to fully charge for up to 8 hours of usage and, for those rainy day gaming marathons that may last longer, the charging lead is long enough to reach from the USB dock to your head!

Not only is the MXL-1191 practical with first-rate audio quality, the design is undoubtedly stylish with a distinct retro look. Moreover, it is extremely comfortable and the soft, padded headband with secure metal sliders guarantees the best possible fit for all, ensuring hours

upon hours of wear without any discomfort. The conveniently located power and volume controls on the ear again proves the lack of effort required to utilise this particular headset.

Maxell's MXL-1191 is the new high quality, professional digital headset for home entertainment and voice applications. It guarantees an enhanced audio experience without the frustrating limitations of wires. The user-friendly design, practical USB Plug & Play and simple recharging method, proves that this headset offers maximum performance with minimal fuss. So, release yourself from the wires and experience audio as you've never heard it before with the new Digital Wireless Headset from Maxell.

END.

Note to Editors:
